Data Collection Analytics Reports

Data Collection: Analyze & Report

Delta features a robust and intuitive data collection form **analytics** functionality. Incorporating basic and advanced functionalities of spreadsheet software such as Excel, forms analytics allows the user to view, analyze, and report on any aspect of a given data collection set.

Five types of reports are available: Table, Pivot Table, Pie Chart, Mixed Chart, and Map.

Table Reports are straightforward grid reports, with functionality similar to Excel.

Pivot Table Reports also have functional similarities with Excel's functionality.

Pie Chart Reports display data interactively, where users can drill down into periods from the global view.

Mixed Charts Reports allow users to graph several data subsets side by side, for example, data collected each individual year of a project.

Map Reports are geospatial visualizations from datasets which contain sufficient location information, either a Locations field, or one of two GPS fields.
